

To whom it may concern:

Kalettes™ have been developed entirely through natural processes and is therefore a non-GMO vegetable. The breeders of Kalettes (Tozer Seeds) do not produce any GMO varieties.

The development of Kalettes was achieved by developing uniform parent lines of kale and brussels sprouts by self-pollination and then cross pollinating between the parent lines using insects to create the hybrid seed. Because kale and brussels sprouts belong to the same plant species (*Brassica oleracea*), this is an entirely natural process that could occur in the wild.

Genetically modified foods are foods derived from organisms whose genetic material (DNA) has been modified in a way that does not occur naturally, e.g. through the introduction of a gene from a different organism, this process has not been used to produce Kalettes.

Sincerely,

Daniel J. Kleinsmith
GENERAL MANAGER

State of California

County of Santa Barbara

On 7/22/2014 before me Diane Taylor
personally appeared Daniel J. Kleinsmith

who proved to me on the basis of satisfactory evidence to be the person whose name is subscribed to the within instrument and acknowledged to me that he executed the same in his authorized capacity, and that by his signature on the instrument the person, or the entity upon behalf of which the person acted, executed the instrument.

I certify under PENALTY OF PERJURY under the laws of the State of California that the foregoing paragraph is true and correct.

WITNESS my hand and official seal.

Signature of Notary Public
